## 7 I<sup>2</sup>C Bus Interface

I<sup>2</sup>C bus supports bi-directional communications through a serial clock line SCL and a serial data line SDA. I<sup>2</sup>C bus device can be defined as “Master” and “Slave”. INS5710B can only be used as Slave.

### 7.1 Cautions

I<sup>2</sup>C bus includes START, RESTART, STOP conditions, the duration between START and STOP must be less than 1 second just in case the bus to be set to standby mode automatically. If the time is more than 1S, INS5710B will reset I<sup>2</sup>C Interface.

INS5710B I<sup>2</sup>C bus interface supports single byte read/write operations as well as multiple bytes incremental access. After 0xFF address, the next one will be 0x00.

### 7.2 Slave Address

**Table26. I<sup>2</sup>C Bus Slave Address**

Transfer data	Slave address							R/W
	bit7	bit6	bit5	bit4	bit3	bit2	bit1	bit0
65h (Read)	0	1	1	0	0	1	0	1 (Read)
64h (Write)								0 (Write)

INS5710B I<sup>2</sup>C bus Slave Address is [0110 010\*].

### 7.3 I<sup>2</sup>C bus protocol

It is assumed CPU is master and INS5710B is slave in this section.

#### 7.3.1 Write process

I<sup>2</sup>C bus includes an address auto-increment function, once the initial address has been specified, the

INS5710A increments (+1) the address automatically after each data is sent, then to write next data.

- (1) CPU sends start condition[S]
- (2) CPU sends INS5710B's slave address with R/W bit to set to write mode
- (3) CPU verifies ACK signal from INS5710B
- (4) CPU sends write address to INS5710B
- (5) CPU verifies ACK signal from INS5710B
- (6) CPU sends write data to the address specified at step (4)
- (7) CPU verifies ACK signal from INS5710B
- (8) Repeat (6) (7) if multiple bytes need to be written, address will be incremented automatically
- (9) CPU ends stop condition[P]

### 7.3.2 Read process

Writing the address to be read with write mode firstly, then reading the data with read mode.

- (1) CPU sends start condition[S]
- (2) CPU sends INS5710B's slave address with R/W bit to set to write mode
- (3) CPU verifies ACK signal from INS5710B
- (4) CPU sends address for reading from INS5710B
- (5) CPU verifies ACK signal from INS5710B
- (6) CPU sends RESTART condition [Sr]
- (7) CPU sends INS5710B's slave address with R/W bit to set to read mode
- (8) CPU verifies ACK signal from INS5710B
- (9) CPU reads data from the specified address in step (4)
- (10) CPU sends ACK signal for "0"
- (11) Repeat (9) (10) if multiple bytes need to be read, address will be incremented automatically
- (12) CPU sends ACK signal for "1"
- (13) CPU sends stop condition[P]

## 8 Reflow Soldering Curve

Standard: IPC/JEDEC J-STD-020

Figure 3. Reflow Soldering Curve

Note: It is suggested to solder IC under the condition shown in the curve above. Must pay attention to the temperature and time when manual soldering, if the temperature over +260°C, or you will make the xo performance bad, even damage it.
