3. Workflow Diagram

Run1: Fast track. Adjust the OCO 10MHz output frequency quickly to track the 1PPS of 10MHz with 1PPS reference.
 Run2: Slow track. Adjust the OCO 10MHz output frequency slowly when the phase error is in the define range.
 Hold Over: GPS 1PPS reference miss, an algorithm has been developed which enables adaptive modeling of the frequency stability of an OCO with reference to a GPS timing signal.
 Free Run: Clock module power on without 1PPS reference anyway.
