### 5. UART

UART interface is used for management and TOD, which has a fixed baud rate (9600-8-1-N) using 1 stop bit and no parity. It is a LVTTTL-compatible port and needs an external translator to work with other signal types (such as RS-232C or RS-485).

### 6. Control Pins

CM55 is a clock module which synchronizes the local clock to reference such as 1 PPS retrieving from GPS. CM55 will work normally performing synchronizing algorithm when the SYNC\_CTRL pin is driven high. It also could be forced to work in free-run or holdover status when the SYNC\_CTRL pin is driven low.
