## 5. UART

UART interface is used for management and TOD, which has a fixed baud rate (115200) using 1 stop bit and no parity. It is a LVTTL-compatible port and needs an external translator to work with other signal types (such as RS-232C or RS-485). Please contact DAPU for the detail information.

## 6. Control Pins

CM22 is a clock module which synchronizes the local clock to reference such as 1PPS retrieving from GPS. CM22 will work normally performing synchronizing algorithm when the SYNC\_CTRL pin is driven high. It also could be forced to work in free-run or holdover status when the SYNC\_CTRL pin is driven low.
